FOREWORD

This is the fifth volume in a series of supplements to the Canadian Statistical Review. The first four volumes were issued biennially starting with 1953, the last being for 1959. The present volume differs from the first four in that it is an Occasional Paper, i.e., it is to be issued from time to time as the need arises rather than biennially. It also differs in that it contains only annual data whereas the earlier volumes contained both annual and monthly data. A selection of the important monthly figures is now carried in another publication called the "Annual Supplement" to the Canadian Statistical Review. (DBS Catalogue No. 11-206).

The present volume is similar to the others in that its contents, table headings and table numbers (with a few exceptions) are the same as those in the tabular section of the Review. As formerly this publication is to be used in conjunction with the latest monthly issue of the Review; to facilitate comparison with monthly figures, most of the annual data are on a monthly basis, i.e., expressed as an average per month for the year, and this is so indicated in the table headings. However, in some series where it is customary to use the total for the year rather than the monthly average the totals are presented; to make their levels comparable with monthly figures, the totals should be divided by twelve, or by four in case of quarterly data. Where they occur, these departures are shown in the table headings as "yearly totals" or "years" or are indicated in the footnotes.

For easier reference, the footnotes are given at the bottom of each table. Most of the footnotes have been expanded from previous issues and give a brief description of the nature of the data, its method of collection and changes which have occurred over time.

All the tables include 1962 as the last year and extend to 1926 or as far back as data are available. The figures for the current years were the latest available early in 1963 and some of them are still subject to revision.

The present volume was prepared in the Current Business Indicators Section, National Accounts and Balance of Payments Division of the Dominion Bureau of Statistics.

WALTER E. DUFFETT,

Dominion Statistician.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- (..) means "not available".
- (-) means "nil" or "less that can be shown with number of digits used".

Due to changes in classification and coverage it is not possible to obtain detailed historical data for Table 102 "Federal Government Budgetary Revenues and Expenditures" as appearing in the monthly issues of the Canadian Statistical Review.

In many cases, current data are subject to further revision.

TABLE OF CONTENTS

T	able		Page
		Population	
	1.	Immigration to Canada, by Country of Last Permanent Residence	5
	2.	Population, by Provinces	6
	4.	Deaths, by Provinces	7 8
	5.	Marriages, by Provinces	9

						3						

¹ Data for the years 1931, 1941, 1951 and 1961 are from the decennial Censuses. The intercensal population extimates are derived from an addition of the births and immigration occurring over the 12-month period ended June 1 of each year and from a subtraction of the deaths and estimated emigration based largely on statistics obtained from United States and United Kingdom sources, over the same period, in estimating the intercensal population of each province allowance is also made for interprovincial migration. Starting with 1956 Census, Family Allowance data have been used for this purpose. In the period 1946 to 1956 migration data from the June Survey of the Labour Force were used to calculate interprovincial migration, and prior to 1946 mainly vital statistics and school registrations.

² Although Newfoundland data are shown separately for the entire period, they are included in the "Canada" totals starting with 1949 onwards.

¹ Throughout this table, Newfoundland is included starting with 1949. In 1948 the last year before Confederation, Newfoundland's Gross National Product was about \$175 million.

¹ Includes the withholding tax applicable to this item.

¹ Includes change in farm inventories as shown in column 9, Table 10. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board.

⁴ Includes net income of independent professional practitioners.

⁵ The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment.

¹ Includes outlays on new durable assets such as building and highway construction by governments, other than government business enterprises. Also includes net purchases of government commodity agencies.

² Includes capital expenditures by private and government business enterprises, private non-commercial institutions, and outlays on new residential construction by individuals and business investors.

³ See footnote 5, Table 6.

⁴ Excludes shipments of military equipment to NATO countries under the Defence Appropriation Act.

¹ Price indexes based on 1949 were used to deflate data for the years 1947-56 while indexes based on 1957 were used for the period 1956-62. The data for the years 1947 to 1955 were arithmetically converted to constant 1957 dollars, using 1956 as the year of overlap, It should be noted that as a result of the linking process, year-to-year movements in both the aggregate and the components of the 1957 dollar series are identical to those of the 1949 dollar series as published in Table 8A. The linking process produced residual differences so that the components will not necessarily cross-add. See also footnotes to Table 7.

¹ Price indexes based on 1935-39 were used to deflate data for the period 1926-47, while indexes based on 1949 were used for the years 1947-56, and indexes based on 1957 were used for the period 1956-62. For the historical series, i.e., 1926-62, the data were arithmetically converted to constant, 1949 dollars, using 1947 and 1956 as years of over-lap. The linking process produced residual differences, so that the components will not necessarily cross-add. See also footnotes to Table 7.

¹ This item differs from column 6 of Table 6, by excluding the adjustment which has been made to take account of the accrued net earnings arising out of the operations of the Canadian Wheat Board.

² Includes all government debt interest paid to persons.

¹ The items electricity and gas have been classified to non-durable goods rather than services. The annual values shown will thus differ from those shown for the years 1947-54 in the publication "National Accounts, Income and Expenditure, 1926-1956".
² Includes net expenditure abroad.

¹ The Index of Industrial Production is a quantity (or volume) measure of the unduplicated production of manufacturing, mining, electric power and gas utilities, and of the individual industries within this aggregate. From 1935 to 1945 the Index is on the 1935-39 base, with Gross Domestic Product as weights for the manufacturing, mining, electric and gas aggregates. Weights for industries below this grouping are value added and for commodities within industries are gross selling values. From 1946 to date the index is on a 1949 weight base. In the re-basing, the Gross Domestic Product weights are extended to a larger group of industries; below this level the weights are still value added for individual industries and selling values for commodities within industries. The earlier based index is arithmetically linked with 1949 to provide a continual historical series. Although the industries presently covered contribute only about one-third of total Canadian domestic production, cyclical movements in the Index generally coincide with those for aggregate economic production. For a complete description of concepts, sources and methods, see Reference Papers in sources below.

¹ Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and 'tips', is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Newfoundland is included starting with 1949.

The total Canada figure includes Yukon, Northwest Territories and Canadian residents abroad.

¹ The estimates in this table which refer to 1946 and later years are derived from a series of sample surveys. For the period 1926 to 1945 inclusive, the estimates are projections back from 1946 using as benchmarks 1931 and 1941 Census data adjusted to the sample survey concepts. Estimates based on sample surveys are subject to sampling error; in general the sampler street to relative sampling error, Residents of the Yukon and Northwest Territories, members of the armed services, Indians on reserves and inmates of institutions are excluded from the surveys. Newfoundland is included starting with 1950.

^{1950.}Prior to 1946, estimates refer to June 1st of each year. From 1946 to 1952, figures are averages of monthly surveys. From 1953 to 1962, figures are averages of monthly surveys.

Persons on temporary lay-off are included in the estimates of the "Employed" from 1926 to 1945. From 1946 to 1962, persons on temporary lay-off are included in the estimates of "Employed".

¹ Figures are yearly totals unless otherwise specified.
² Seasonal benefit data included commencing 1950.
³ On last working day of each month.
⁴ Since 1954 this is an estimate.
⁵ Commencing 1957, figures exclude fishing benefit claimants.
⁶ The statistics on registrations for employment are compiled from two different Unemployment Insurance Commission's reporting forms. Registrations on file at the end of the year is a statistical count of applications on file at the close of business on a specified day (Form UIC 757), excluding certain categories of registrations. Registrations received, (as well as vacancies notified and placements effected) during a year is a cumulative operational total (Form UIC 751).

¹ Data reported by firms customarily employing 15 persons or more. Prior to 1949 monthly data were compiled as of the first of the month and refer to the last pay period of previous month, i.e. January data actually relate to the last pay period in December. The annual averages during this period therefore relate to the 12 months ending November 30. Commencing in 1949 monthly data refer to the last pay period of the month to which the report relates, i.e. January data relate to the last pay period in January, Annual averages for the period 1949 and subsequent years therefore relate to calendar years and are not strictly comparable with averages for earlier years. Newfoundland is included starting in 1949.

² Excludes agriculture, fishing, trapping and domestic service.
³ Includes insurance and real estate.
² Excludes multic administration and defence and such community services as health and education.

Excludes public administration and defence and such community services as health and education.

¹ Data are for wage-earners for whom establishments usually employing 15 persons and over keep records of hours actually worked, mainly hourly rated or production workers. Statistics are compiled from data which relate to the last pay period of the month. Newfoundland is included starting in 1949.
² In addition to those listed, tobacco products, petroleum and coal, and miscellaneous industries are included in non-durable manufacturing.

¹ Data are for wage-earners for whom establishments usually employing 15 persons and over keep records of hours actually worked, mainly hourly rated or production workers. Statistics are compiled from data which relate to the last pay period of the month. Data include hours paid in regular and overtime periods and hours of paid absence in the pay periods reported. Newfoundland is included starting with 1949 onwards.

² In addition to those listed, tobacco products, petroleum products and miscellaneous industries are included in non-durable manufacturing.

¹ Industry Selling Price Indexes are published for most of the manufacturing industries and as such are the first Canadian "wholesale" price indexes to be organized according to an industry classification. Because of their common form of organization these indexes may be used in conjunction with a whole array of related statistics such as shipments, employment and inventories, to name a few, which also conform to the Standard Industrial Classification. Thus, Industry Selling Price Indexes have a clearly defined conceptual basis which fits into a common framework of analytical statistics. For this reason and because of their relatively high standard of representativeness they are recommended over their counterpart commodity series of the General Wholesale Index for purposes relating to output of manufacturing industries. However, because Industry Selling Price Indexes are available since 1956 the General Wholesale Index and its components must still be relied upon for earlier periods.

The indexes are weighted according to the value of shipments in 1953 as reported to the Industry and Merchandising Division of the Dominion Bureau of Statistics. Due to various difficulties the price data could not be extended prior to 1956 and that year is taken as the time base for the indexes.

¹ The General Wholesale Index is a commodity classified index of prices. The index is ''general'' inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called ''wholesale'' because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term ''wholesale'' is more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of ''middle men'' who trade in commodities of a type or in quantities characteristic of primary marketing functions.

The entire index is presently on a 1935-39 time base, though 1926 weights are used for the years from 1926 to 1934 and 1935-39 weights from the year 1935 on. The weights used are values in exchange in both periods, though the definition of these values differ. In 1926, at the individual commodity level, the weight used is the total value in exchange, but at the group level, to avoid duplication, the weight assigned is the gross value less the estimated value which received further processing. In the 1935-39 weighting base full value in exchange is used at the commodity and group levels.

Includes gold.

Tocludes gold.
 Consists of General Wholesale Index less animal products and vegetable products component groups.
 The series comprise the General Wholesale Index.
 Consists of iron products and non-ferrous metals products component groups less gold.

⁷ Preliminary.

¹ This index is based on a selection of thirty raw material commodities possessing some of the more flexible prices. On a monthly basis the index is considered to be a sensitive indicator of economic conditions. It is a simple geometric average of the prices included, using prices in 1935-39 as a base.
² This index was developed to measure the price change of materials nousing costs. The weights are based on the estimated material requirement in a national housing target for the year 1946, The index calculated on a 1935-39 = 100 base is arithmetically converted to a 1949 time base.
³ This index is designed to measure the price changes of materials used in non-residential building construction. The weights are obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-50. The index is on

cost of building materials provided by general and trace contractors for a sample of buildings constituted in Canada during the years 300 cm. In the base,

4 Wheat prices used in this index are buying prices of the Canadian Wheat Board, for Nos, 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced. Commencing August 1, 1949, Western oats and barley were brought under the control of the Canadian Wheat Board. Prices used since that time for the index have been initial payments to farmers, with participation payments included whenever they are announced. The index is on a 1935-39 time and weight base with value of commodities in farm marketings being used as weights.

¹ The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases made by a particular population group in a specified time period. The basket is a constant of equivalent quantity and quality of goods and services but only items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item, are included in the basket. Presently the Index contains some 300 items.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families—(a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000.

Starting with January 1961, the index is based on 1957 family expenditure patterns; for the years 1949 to 1960 on expenditure patterns in 1947-48, for the years 1940 to 1948 on expenditure patterns in 1937-38 and for the years 1926 to 1939 on expenditure patterns in 1926. The differing weight base periods are arithmetically linked to the time base 1949=100. Prior to 1949 the Consumer Price Index was known as the Cost of Living Index.

² Excludes alcohol from 1935 to 1948.
³ This index is designed to measure farm family living costs and is weighted by farm family expenditure patterns in 1935-39. It is available only for January, April and August of each year.

Data for total shipments and new orders are monthly averages while data for unfilled orders and inventories are values at year end.

Source: Monthly report "Inventories, Shipments and Orders in Manufacturing Industries", Catalogue No. 31-001, DBS.

¹ Data for total shipments and new orders are monthly averages while data for unfilled orders and inventories are values at year end.
² In industries where long term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.
³ Total new orders received during the period, at estimated selling values. The series cover total new orders, net of cancellations, regardless of whether the orders will be filled from stocks or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.
⁴ Estimated total unfilled orders on books at end of year, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts.
³ Prot to 1955, manufacturing inventories included finished goods owned by manufacturers, other than plants or plant warehouses, which carried stocks and made sales direct to customers. Starting with 1955, inventories have included goods owned by manufacturers as held at the plants or plant warehouses only. During 1955 he value of such inventories held, at trading outlets, averaged approximately \$225,000,000. The "Inventories of finished products" series, from 1955 on, is therefore not comparable with previous years.

* The ratio of inventories to shipments is an average of the twelve monthly ratios of inventories to shipments.

Releases of domestically manufactured tobacco for consumption in Canada.
 End of the year.
 The production of beer is shown in thousand barrels of 25 gallons each. Starting with April 1949, Newfoundland is included.
 Includes bottling of imported liquors.

Newfoundland is included for pulpwood, wood pulp and newsprint data starting with 1949.
 Mechanical and chemical wood pulp exclude "screenings" from 1926 to 1932 inclusive but include "screenings" from 1933 to 1960 inclusive.
 Total wood pulp production covers mechanical and chemical screenings, also unspecified pulp—soda, semi-chemical defibrated and exploded.
 Mill shipments destined for export.

¹ Effective in 1957, the data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account, totals shown are not comparable with those of previous years.

² Starting with 1950, data include some silvery pig iron formerly included with ferro-alloys. Years 1959 through 1961 include the "remelt iron" product in the smelting of titanium ores.

³ Excluding shipments for further processing within own firm and for sale in Canada.

⁴ Prior to 1946, imports include castings, forgings and rolling mill products. Starting with 1946 they include, in addition to all other shapes, wire and wire rope. Beginning with 1954 imports exclude castings, forgings, fittings and couplings.

¹ Electric and other.
² In some cases, these shipments are not at the factory level, and stocks at beginning of year plus production less shipments do not equal stocks at end of year.
3 End of year.

¹ Prior to 1956 data pertained to "Central Electric Stations" only, i.e. to firms which sold electric power. While most of these firms were utilities, a small number of industrial concerns which had some electric power available for sale were also included. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electricity which they have generated or purchased. Industrial establishments are defined as companies or individuals which generate electricity mainly for use in their own operations.

Starting with 1956 annual statistics have been collected as far as possible, for all agencies generating electricity, including both utilities and industrial concerns. Thus, statistics are now available, as from 1956, on the total production and distribution of electric power. The year 1956 is shown on both the new and the old bases, so as to indicate the effect of the reclassification.

In the annual figures, production and consumption data for the Yukon and the Northwest Territories are included in the Canada totals, with consumption data being included in the British Columbia totals.

2 Less imports.

3 Total net generation less net exports.

Starting in 1954, a number of distributors not previously reported were added to the survey.
 Includes some free customers.
 Includes gas used for house heating.
 Barrels of 35 Imperial gallons.
 Increases in natural gas sales and decreases in manufactured gas sales caused by transfer of large companies from manufactured to natural gas.

¹ In March 1955, the method of reporting certain categories of refining operations was altered. However, the continuity of the series has been maintained,

In March 1955, the method of reporting certain categories of ferming operations of ar as possible.

Prior to 1940 data refer to products made for sale,
Prior to 1940 includes a small amount of aviation gasoline.
Prior to 1937, series represent production for sale of all fuel oils including stove oil. Beginning with 1937, stove oil is excluded.
Starting in 1957, includes tractor fuels.
Prior to 1940, series used represent apparent domestic consumption. Data were computed from production, imports, exports and stocks at refineries. From 1940 to 1955, data exclude a certain amount of imported fuels.
Prior to 1946, fuel oil data include stove oil; stove oil is excluded since 1946. Apparent sales of light fuel oils including stove oil in 1946 (comparable to previous years) are estimated at 1,045 thousand barrels.
Prior to 1946 series include stove oil. In 1946, stocks of light fuel oils, including stove oil, are estimated at 3,198 thousand barrels.
Prior to 1946 series include Stove oil. In 1946, stocks of light fuel oils, including stove oil, are estimated at 3,198 thousand barrels.

Newfoundland is included in production figures starting in 1949.
 Includes fine copper in ore, ingots, bars, billets, rods, strips, sheets and tubing.
 Includes ingots, bars and billets.
 Includes nickel in matte or species, oxide and fine.
 Includes lead in ore and in pigs.

¹ The 57 municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-46. From 1926 to 1949 the data represent building permits issued within the actual limits of these municipalities, and figures for adjacent municipalities would be included only if they were annexed to the reporting municipality. Starting with 1949, the data cover approximately the metropolitan areas of the reporting municipalities these are defined in the 1951 Decemial Census. Since this creates a large discontinuity both sets of data are given for 1949 for comparative purposes. The total for the 57 municipalities includes only the actual limits of the reporting municipalities for the entire period covered, and does not have the discontinuity shown in 1949 for the individual cities.

¹ Starting with 1950, Newfoundland is included.

¹ Starting in 1948 the data were obtained from 507 municipalities. The coverage was gradually extended since then, and 827 municipalities were included starting with 1959, 1,014 in 1961 and 1,100 in 1962. While coverage will be extended further, it will be impossible to obtain complete coverage as building activity occurrency outside of registration areas (rural and farm areas) is omitted. Refer also to Table 58.

¹ A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage

Sources: Monthly report "New Residential Construction", Catalogue No. 64 - 002, DBS, and annual report "Canadian Housing Statistics", C.M.H.C.

A dweifing unit is defined as a structurary separate server in the quarter of the control of a nation-wide survey, the field work for which is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, are enumerated completely every month. The remainder of the country is covered on a sample basis every quarter. The quarterly estimate is added to the quarterly accumulation of months to obtain a total estimate for all areas by quarters. Newfoundland is included beginning with 1950.

¹ Included in "Centres 5,000 and over" are all incorporated urban places of 5,000 population and over and the component municipalities of Census Metropolitan Areas, according to the most recent census. See also footnotes 1 and 2, Table 61 for definition of a dwelling and the method of obtaining the data.

¹ Data include Newfoundland, Yukon and Northwest Territories.

² Newfoundland is included starting with 1949 for clay products, 1950 for iron and steel products and 1952 for gypsum products.

³ Includes shingle type siding.

⁴ Hollow blocks including fireproofing and load bearing tile.

⁵ Data from 1952 through 1957 represent factory shipments.

⁶ Includes planks and boards and square timber.

Includes planks and boards and square timber.
 Annual data for cement pipe and tile cover production of firms which normally account for 90 per cent of the total Canadian output of concrete products.
 Prior to 1946, data represent hardwall plaster only, while later figures include other gypsum plasters.
 For building insulation only.
 Prior to 1944 data represent factory sales.
 Since 1948 data include concrete chimney blocks.
 Data for concrete bricks and concrete blocks represent factory shipments since 1952.
 Data represent sales of firms which normally account for 96 per cent of total production for Canada.
 Data prior to 1952 represent value of production.

¹ Weights are based on a survey of farmers operating costs in the year 1938 and the index is brought to a 1935-39=100 time base.
² Weights are based on average annual marketings in the period 1935-39. Newfoundland is excluded from the index, Western grain prices used in the construction of the Index prior to August 1961 are final prices, From August 1961 the prices used are final prices for oats and barley and initial price for wheat.
³ Includes advance equalization payment on barley until March 1947 and subsidy on hogs from 1944 to September 1960.
⁴ Based on price of hogs, including Dominion premium. A rise in ratio favours production of beef.
⁵ Previous to January, 1958, quotations referred to steers up to 1,000 lbs.; now they refer to all weights.
⁵ Prior to 1941, prices were quoted on a live weight basis.
⁵ Prior to 1939, Barley No. 1 feed was designated as Barley No. 3, C.W.

¹ Data are monthly averages for crop years ending July 31.
² Overseas clearances as reported by the Statistics Branch, Board of Grain Commissioners for Canada plus United States imports, From 1955-56 includes Customs exports of bagged seed oats,
³ Canadian Customs returns, adjusted for time lag so as to indicate more accurately the month when wheat flour actually leaves the country.
⁴ Includes eggs for hatching,

Beginning in 1945, customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Includes stocks held by manufacturers, wholesalers and other warehouses.

Includes Newfoundland starting with 1949.

Includes lima beans from 1948.

All data include chill sauce. Data for 1956 and subsequent years include tomato sauce, sauces for meat and fish and sauces, other.

Includes Agricultural Stabilization Board purchases.

Includes beef stews and boiled dinners.

Not comparable to previous figures owing to increased coverage. ¹ Current (or inter-censal) estimates of retail sales are based primarily on a sample collection of representative stores; the estimates are revised each time that a new total survey, the Decennial Census of Distribution, provides the necessary check data. Revisions to the inter-censal estimates between 1930 and 1941 were made and published at the conclusion of the 1941 Census. They are repeated here in conjunction with the recently completed revisions for the inter-censal syears 1941-51 to show an unbroken series of retail sales from 1930 to 1951. The annual estimates after 1951 are compiled in two broad stages. The first is a combination of (a) an annual survey of approximately 10,000 retail stores in all trades and areas, (b) a survey of department stores and (c) a survey of all known retail chain stores. Annual chain store sales are compiled from annual survey of all chain store from the second stage is an annual survey designed to yield adjustments resulting from store "births" and "deaths" by trades and by regions. The results obtained from the completion of these two broad stages are combined and published approximately one year after the survey period. Newfoundland is included starting with 1949.

2 Components may not add to total due to rounding.
3 Not available prior to 1954.
4 Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and

A Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

5 Includes tobacco and "all other trades".

¹ Data for retail chain stores are obtained from a survey of all known retail chain organizations in Canada. For the purpose of these surveys, a retail chain store firm is defined as follows: "An organization operating four or more retail stores in similar or related kinds of business under the same ownership". It is important to note, however, that chain department stores are not included in the statistics published for the retail chain store field. As well, voluntary groups or chains which are generally defined as independently owned stores affilliated with suppliers for purchasing and for other benefits are not included in this survey unless they have met the ownership clause in the definition. See also footnote 1, in Table 76.

² Stocks at end of year at cost value.

See footnote 1 in Table 76.
 Stocks at end of year at selling value.
 Sales and stocks by departments prior to 1951 have not been revised in accordance with the 1951 census benchmarks. Such revision would, however, change these figures very slightly.

¹ No absolute total of "consumer credit" is available. For certain purposes fully secured loans granted by banks and life insurance companies may not be considered as outright indebtedness. On the other hand, certain avenues of credit are not surveyed i.e. service credit (doctors, dentists, utility companies, hotels, etc.) loans between individuals, etc.
² Conditional sale agreements held in connection with the retail purchases of consumers' goods.
³ Cash personal loans of companies licensed under the Small Loans Act usually repaid in instalments.
⁴ The use of all purpose credit plans makes it impossible to separate instalment and charge accounts receivable.

¹ The indexes prior to 1951 do not include Newfoundland. The sample on which they are based was substantially although not exactly comparable to the latter sample upon which the dollar sales estimates are based. The indexes, therefore, are being shown to give a general impression of the trend. Data covers wholesalers proper only, i.e. those wholesalers buying and selling on their own account, taking title to the goods and generally performing the functions of warehousing and delivering.

Source: Monthly report "Wholesale Trade", Catalogue No. 63-008, DBS.

^{*} The use of all purpose credit plans makes it impossible to separate instalment and charge accounts receivable.

Series excludes trades extending credit largely to commercial users, i.e. farm implement dealers and lumber dealers, but includes charge account receivables of motor vehicle dealers.

Amount retrieve to all purposes credit largely to commercial users, i.e. farm implement dealers and lumber dealers, but includes charge account receivables of motor vehicle dealers.

 ⁶ Amount owing to oil companies, excluding commercial accounts.
 7 Fully secured by marketable bonds and stocks. Excludes loans to finance purchase of Canada Savings Bonds.

¹ Commencing with April 1949, Trade of Canada includes Newfoundland,
¹ Beginning with statistics for 1958, the trade totals used for the purpose of computing the Index of Declared Values and the Index of Physical Volume are
adjusted for "Special Transactions-Non-Trade". See foctnote 1, Table 84.
¹ Adjustments in Total Domestic Exports and in Miscellaneous Commodities for the years 1946 to date have been made to take account of "Special Transactions-Non-Trade". See also footnote 1, Table 84.
⁴ These price and volume indexes are considered reasonably accurate for the periods 1926 to 1940 and 1946 to 1962. They are not given for the period
1941-45 since their validity is dubious. The composition of Canada's Trade was sharply different from its peacetime pattern in these years, and since no
reliable price indicators could be obtained for the bulk of the war materials recorded in the trade statistics, the price indexes could not be adapted to reflect
this change in the composition of Trade.
¹ Includes pigs, lingots, blooms and billets, castings and forgings and rolling mill products.
⁵ Includes square timber.

Source: Monthly report "Trade of Canada, Imports", Catalogue No. 65-007, DBS.

¹ Commencing with April 1949, Trade of Canada includes Newfoundland,
² Beginning with 1958, the trade totals used for the purpose of computing the Index of Declared Values and the Index of Physical Volume are adjusted for
"Special Transactions-Non-Trade". See footnote 1, Table 84.
³ Adjustments in Total Imports and in Other Miscellaneous Commodities for the years 1946 to date have been made to take account of "Special Transactions-Non-Trade". See also footnote 1, Table 84.
⁴ These price and volume indexes are considered reasonably accurate for the periods 1926 to 1940 and 1946 to 1962. They are not given for the period
1941-45 because their validity is dubious. The composition of Canada's Trade was sharply different from its peacetime pattern in these years, and since no reliable price indicators could be obtained for the bulk of the war materials recorded in the trade statistics, the price indexes could not be adapted to reflect this
change in the composition of Trade.
³ Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products.

¹ Starting in 1946 and in the years following, the figures for exports and imports differ from those of earlier years in that Special Transactions — Non-Trade are excluded from the totals. This category includes the various commodity movements which either have no international financial implications, or for various reasons, are better considered separately from merchandise trade in economic analyses. The more important of these items are settlers' effects, private donations and gifts and tourist purchases. A further result of these changes is that export and import totals will now have substantially the same coverage, and will provide a much truer picture of the merchandise trade component of the Balance of Payments. In 1946 and in the few years immediately following it, because of the change, exports are about \$\frac{2}{2}\$ million less and imports about \$\frac{4}{2}\$ million fraces and international financial implications of the change \$\frac{4}{2}\$ million less and imports about \$\frac{4}{2}\$ million less and imports about \$\frac{4}{2}\$ million less and imports about \$\frac{4}{2}\$ million fraces and international financial implications, or change about \$\frac{4}{2}\$ million fraces and international financial implications, or change about \$\frac{4}{2}\$ million fraces and international financial implications, or change about \$\frac{4}{2}\$ million fraces and international financial implications, or change about \$\frac{4}{2}\$ million fra

¹ The trade figures have been adjusted to reflect more closely the timing of payments, particularly for certain capital goods, and to delete commodities which are either covered elsewhere in the accounts or are not pertinent to balance of payments purposes.
² Balance also reflects all other current transactions with the exception of wartime grants and mutual aid which are included in current receipts but excluded from current payments as follows:

million dollars

1,002 518 960

Net transfers for foreign direct investment in Canadian enterprises; from 1927 to 1939 also includes Canadian direct investment abroad.

Net sales (+) or purchases (-) by Canadians of Canadian and foreign securities (trading, new issues and retirements including official wartime repatriation).

¹ Based on yearly carloadings reported by Class I and Class II railways, (the Canadian National, Canadian Pacific and other common carrier railways whose gross operating revenues average \$500,000 or more annually). Throughout the period, there has been a steady gradual increase in the average capacity of freight cars owned by Canadian railways, as shown above.

² As of September, 1952 includes other packing house products (non-edible) formerly included with livestock, meats and packing house products.

³ Does not agree with sum of items due to revisions which cannot be allocated.

¹ Includes statistics of the Canadian National Railways, the Canadian Pacific Railway Company and other common carrier roads whose gross operating revenues were \$500,000 or more annually. Newfoundland is included starting with 1949.

² A new ''Uniform Classification of Accounts'' became effective for the C.N.R. and C.P.R. on January 1, 1956 and a year later for other reporting railway companies. The principal differences between the old and the new methods of accounting, as they relate to this particular table, are as follows: (a) Waterline operations of railways were included in operating revenues to the end of 1955 after which only steamship and barge services on British Columbia Lakes and rivers were reported, and (b) railway tax accruals, equipment rents and joint facility rents, which under the old accounting method were deducted from net operating revenues, are considered part of railway operating expenses in the new classification.

³ Prior to 1956, the C.N.R. included express and communications in these accounts, while the C.P.R. did not. Following adoption of the new accounting procedures in 1956, these activities, as well as highway transport (rail) operations, have been classified as rail services and are from railway detail.

⁴ Presented on a basis approximating the new accounting classification in order that the effects of the change can be measured.

⁴ As of January 1958, the Hudson Bay Railway was absorbed into the Canadian National Railway System.

¹ Prior to 1941 statistics are for shipping years ending March 31. Starting with 1941 the figures are on a calendar year basis. The year 1941 is given on

¹ Prior to 1941 statistics are for snipping years ending factor 51 totaling with 1941, data include Great Lakes shipping between United States and Canadian inland ports.

² Starting with 1941, data include Great Lakes shipping between United States and Canadian inland ports.

² Prior to 1957, cargo handled at Montreal includes cargo handled at port of Contrecceur. Starting with 1957, such cargo is excluded.

² Commencing with 1957, coastwise shipping includes cargo unloaded at non-customs ports.

³ Data are averages of nine months, April to December.

⁵ Includes Canadian territorial operations of foreign carriers and international services of Canadian airlines. Since 1947, data relate to unit toll transportation only, while statistics for earlier years also include passenger-miles and ton-miles performed in charter and contract services (bulk transportation).

² Includes Cranadian territorial operational mail ton-miles.

² Includes Greight, express, excess baggage and mail ton-miles.

¹ Data refer to assignments made under the Bankruptcy and Winding Up Acts only. The figures to 1955 given in the upper section of the table include all failures reported under the above acts. The lower section, starting with 1955 onwards, excludes the failures of individuals who did not operate businesses as such. The year 1955 is given on both bases. The amount of liabilities by industry on the former basis is not available.

² In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made by this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

								and the second			

1 Until 1954 cash reserves (consisting of holdings of Bank of Canada notes and deposits with the Bank of Canada) and statutory deposits are averages of juridical days for the year. Beginning in 1954 in accordance with section 71 of the Bank Act of 1954, Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays not the previous month.

2 The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for 1954 are on the new basis and, except for "General Loans" (see footonte 8) adjustments have been made to put figures for earlier dates on a comparable basis.

3 Figures for 1954 and later are not adjusted for items in transit and are not strictly comparable with the figures in this section for earlier periods.

4 The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" during 1957 in the returns of the banks to the Department of Finance. The figures prior to 1957 are thus not comparable with those for that year and later! The amount of deposits reclassified was approximately \$140 million.

3 Beginning in 1957, figures for chartered bank holdings of Government of Canada and provincial government securities are based on "amortized value" and are therefore not directly comparable with figures for preceding years, which are based on "not exceeding market value".

4 Beginning in 1957, figures for charten chartered bank asset items are not strictly comparable with those for earlier dates, owing to the re-allocation of inner reserves consequent upon the securities valuation change referred to in footnote 5. Investment reserves which became redundant were reallocated to apply against other asset items, mainly general loans, loans in froeign currency and corporate securities.

4 Figures for 1954 and later are not adjusted for items in transit applicable to loans and are not strictly comp

¹ This series gives new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. Provincial totals may not add to Canada totals due to either rounding differences or to the fact that revisions applied to national total are not available for the provinces.

¹ Figures for latest years are subject to revision. Series include all publicly announced issues, and some private placements not publicly announced. Figures include all serial issues and other issues with an original term to maturity of over one year.

² "Other" bonds and debentures include issues of Canadian religious and other institutions and Canadian dollar issues of Australia International Bank for Reconstruction and Development.

³ Direct unmatured market securities excluding Treasury Bills, Treasury Notes and Deposit Certificates.

⁴ End of year.

⁵ Provincial only. Estimated net new issues of municipal from 1946 to 1951 were: 5, 31, 78, 105, 136 and 176.

¹ For the years before 1944, the estimates are based on a special study made in the Department of National Revenue, Data for the years 1944 to 1962 are based on the Department of National Revenue publication "Taxation Statistics" and the Dominion Bureau of Statistics' publication "Corporation Profits".

Data for the years 1959 onwards as published in "Corporation Profits" differ from those published in "National Accounts - Income and Expenditure - Fourth Quarter and Preliminary Annual, 1962" in that revisions made to the National Accounts data have not yet been incorporated into this series.

The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges and charitable contributions are added back to net profits for National Accounts concepts. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses.

Manufacturing detail not available 1926-1952.
Includes tobacco, leather and miscellaneous manufacturing industries.
Includes agriculture, forestry, fishing and construction.

Sources: Quarterly report "Corporation Profits", Catalogue No. 61-003, and occasional report "National Accounts, Income and Expenditure, 1926-1956", Catalogue No. 13-502, DBS.

¹ The number of stocks has varied over the period; the total shown in the column headings represent the current coverage. While the present time base is the year 1956, the weight base is the year 1960. Indexes on earlier bases have been arithmetically linked with the present time base to provide a continous historical series.
